

IPSCO

## "CORRUGATED LOGS"

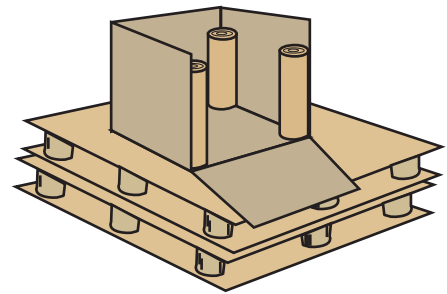

Only choice logs are selected from the "Corrugated Log Forest" in Southwestern Pennsylvania.

The Logs are harvested and transported down the Monongahela River.

The Logs are docked at IPSCO's River Plant where they will be converted into various diameters and lengths to specific customer requirements.

**Uses consist of:** Corrugated Studs for pallets & stacking dividers; Crush proof carton supports; Blocking & Bracing of interior packaging & an inexpensive alternative to "honeycomb" in some packaging situations.

Converted from singleface corrugated and a water base adhesive.  
Sizes range from diameters of 1.5" to 12" and widths up to 50".  
The logs are cost friendly and are an environmentally safe alternative to wood.  
They are light in weight & in some cases, as strong as wood.
